SUMMARY

Sr. Software Engineer at Datacultr (fintech) with 3.5+ years building Node.js/TypeScript backends, React/Next.js web apps and React Native apps. Builds AI-native products: created Nukkad, an MCP server for ordering and running a shop by chatting in Hindi/Hinglish inside ChatGPT or Claude, plus an LLM tool-calling web chat (Gemini). Hands-on with Qdrant vector search and embeddings.

TECHNICAL SKILLS

AI & LLM: MCP (Model Context Protocol) servers & tools, MCP OAuth, LLM tool calling (Gemini API), ChatGPT Apps, Qdrant vector search, embeddings (FastEmbed, Transformers.js), text chunking (LangChain text splitters)
Languages: JavaScript, TypeScript, PHP, SQL, HTML, CSS
Backend & Databases: Node.js, Express.js, REST APIs, GraphQL, Prisma, Zod, MongoDB, PostgreSQL, MySQL, Redis, CodeIgniter
Frontend & Mobile: React, Next.js, Angular, React Native, Expo, Redux, Zustand, Tailwind CSS, jQuery
DevOps & Tools: Docker, AWS (S3, Translate), Render, Neon, GitHub Actions, Firebase, Sentry, Vitest, Nginx, PM2, Git, Jira

EXPERIENCE

Datacultr **Apr 2024 – Present**

Sr. Software Engineer 1 *Aug 2026 – Present · Gurugram, India*

- Built CV3's PIN Release flow (Angular 16): device lookup, eligibility checks and 7-digit offline release PINs for phones and Wi-Fi tablets, with PINs held in memory only and cleared after 5 min idle.
- Retired 47 unused SMF V1 endpoints in the Node.js service and documented the live V2 API surface for QA load-test and E2E automation, reducing the legacy attack surface.
- Built SMF payment audit and reporting APIs with CSV/email export, INR/USD conversion and mismatch detection; fixed totals to count only captured, credited payments.
- Hardened CV3 security: Bearer-auth on Swagger, removed tokens from URLs and exposed endpoints, fixed 12 VAPT findings.
- Restored ServiceDesk email delivery the same day after a Sentry-flagged production SMTP failure.

Software Engineer II (SDE-2) *Jul 2025 – Jul 2026*

- Promoted to SDE-2; owned 9 production projects (4 backend services, 1 React Native app, 4 frontend dashboards).
- Extended the CV3 device-management platform to Air Conditioners and Laptops; set up the new CV3 React (Vite) app with TanStack Query and permission-aware navigation, embedded in the Angular dashboard.
- Delivered SMF V2.0 self-serve commerce: package purchase, Razorpay (India) and Stripe (Pakistan) webhooks with signature validation and duplicate-event protection, licence pools and reseller distribution.
- Designed ServiceDesk V2's sub-permission and proxy-permission system with permission-check middleware, and fixed 95+ GitHub security alerts plus VAPT findings in ServiceDesk.
- Added Indonesian and Sinhala (AWS Translate, Google Translate fallback) plus Swahili and Portuguese in the SMF Retailer App.

Full Stack Developer *Apr 2024 – Jun 2025*

- Owned end-to-end development of the SMF Pilot React Native app (live on Google Play): IMEI barcode scanning, 5 microservice integrations, Razorpay & Stripe payments, Firebase push notifications, deep linking.
- Built the unified Nucleus admin platform (CodeIgniter/PHP), integrating 40+ CRUD APIs across CV3, UAS, DEM and Firebase notification services with role-based access.
- Built Node.js APIs: cv2 search for 7 device models, Firebase notifications service, UAS OAuth2 token, MQTT publish.
- Built a shared Node.js email microservice on Pub/Sub queues, Docker-deployed across all company dashboards, centralizing notifications and cutting per-project email integration effort by 80%.
- Remediated 25 GitHub Advanced Security alerts (exposed secrets, XSS, SSRF, query injection, path traversal) and VAPT findings across Nucleus, SMF and ServiceDesk.

Internshala **Feb 2023 – Apr 2024**

Associate Software Development Engineer *Aug 2023 – Apr 2024 · Gurugram, India*

- Led the redesign of the Placement Guarantee Course student dashboard, improving navigation and data visibility for 50K+ learners.
- Built custom PHP Doctrine repositories to optimize API payloads, cutting response sizes by 40%.

Software Development Engineer Intern *Feb 2023 – Aug 2023*

- Revamped two core student-facing modules with a structured component architecture, reducing reported UI bugs by 30%.

PROJECTS

Nukkad: AI-native hyperlocal commerce for tier-3 India **nukkad.priyanshusaini.in**

TypeScript, Node.js, Express, MCP SDK, Prisma, PostgreSQL (Neon), Zod, Vitest, Render, Telegram Bot API, Gemini API

- Built an MCP server that lets customers and kirana shopkeepers in towns like Muzaffarnagar, Roorkee and Shamli order and run a shop by chatting in Hindi/Hinglish inside ChatGPT, Claude or Cursor, with no app to install.
- Designed role-scoped toolsets (customer, shopkeeper, admin) with business rules enforced in domain services, not prompts: same-city ordering, stock tracking, custom orders, delivery-code order lifecycle and cash-on-delivery.
- Added phone-OTP signup, Google sign-in via MCP OAuth discovery, Telegram order alerts with Accept/Reject buttons, and a web chat where a Gemini model drives the same tools for users without an AI assistant.
- Deployed on Render + Neon with Prisma migrations and a Vitest suite in GitHub Actions; submitted to ChatGPT app review.

Movie Semantic Search **github.com/priyanshusaini1102/movies-vector-search**

Node.js, Qdrant, FastEmbed, Transformers.js, LangChain text splitters

- Embedded movie descriptions with FastEmbed and indexed them in Qdrant with metadata payloads, comparing fixed-size token, sentence-aware (with overlap) and embedding-based semantic chunking.

EDUCATION

Graphic Era University, Dehradun — Master of Computer Applications (MCA) **2021 – 2023**

IMS Noida — Bachelor of Computer Applications (BCA) **2018 – 2021**
