SUMMARY

Sr. Software Engineer at Datacultr (fintech) with 3.5+ years building Node.js/TypeScript backends, React/Next.js web apps and React Native mobile apps. Builds AI-native products: created Nukkad, an MCP server that lets customers and shopkeepers order and run a shop by chatting in Hindi/Hinglish inside ChatGPT or Claude, plus an LLM tool-calling web chat (Gemini). Hands-on with vector search using Qdrant, embeddings and chunking strategies.

TECHNICAL SKILLS

AI & LLM: MCP (Model Context Protocol) servers & tools, MCP OAuth, LLM tool calling (Gemini API), ChatGPT Apps, Qdrant vector search, embeddings (FastEmbed, Transformers.js), text chunking (LangChain text splitters)

Languages: JavaScript, TypeScript, PHP, SQL, HTML, CSS

Backend & Databases: Node.js, Express.js, REST APIs, GraphQL, Prisma, Zod, MongoDB, PostgreSQL, MySQL, Redis, CodeIgniter

Frontend & Mobile: React, Next.js, React Native, Expo, Redux, Zustand, Tailwind CSS, jQuery

DevOps & Tools: Docker, AWS S3, Render, Neon, GitHub Actions, Vitest, Kafka Connect, Nginx, PM2, Cloudflare R2, Firebase (FCM, Auth), Telegram Bot API, Git, Postman, Jira, PostHog, Razorpay, Stripe

EXPERIENCE

Datacultr **Apr 2024 – Present**

Sr. Software Engineer 1 *Aug 2026 – Present · Gurugram, India*

Software Engineer II (SDE-2) *Jul 2025 – Jul 2026*

- Promoted to SDE-2 and given ownership of 9 production projects (4 backend services, 1 React Native app, 4 frontend dashboards) serving fintech operations.
- Architected the Servicedesk backend from scratch in Node.js: generalized user-management APIs, a proxy layer for microservice communication, and role-based authorization with granular permissions.
- Implemented API and MongoDB query logging with user-scoped audit trails, S3 log rotation with compression, and Redis-backed single-session login enforcement, reducing unauthorized access incidents to zero.

Full Stack Developer *Apr 2024 – Jun 2025*

- Built InsureOne, a full insurance-buying portal on Next.js and PostgREST with server-rendered pages, a customer management dashboard and a claims workflow; bootstrapped v1 with V0.AI to speed delivery.
- Owned end-to-end development of the SMF Pilot React Native app (live on Google Play): IMEI barcode scanning, 5 microservice integrations, Razorpay & Stripe payments, Firebase push notifications, deep linking.
- Built a shared Node.js email microservice on Pub/Sub queues, Docker-deployed across all company dashboards, centralizing notifications and cutting per-project email integration effort by 80%.
- Resolved critical VAPT security findings across production dashboards (CAPTCHA, clickjacking protection, XSS filters, rate limiting), achieving full compliance in subsequent audits.
- Merged two legacy dashboards into the unified Nucleus Platform (CodeIgniter/PHP), integrating 40+ CRUD APIs from multiple microservices with consolidated logging.

Internshala **Feb 2023 – Apr 2024**

Associate Software Development Engineer *Aug 2023 – Apr 2024 · Gurugram, India*

- Led the redesign of the Placement Guarantee Course student dashboard, improving navigation and data visibility for 50K+ learners.
- Migrated the flagship PGC Student Profile Tool from AngularJS to React, adding new data points and improving interactivity and load speed.
- Built custom Doctrine repositories in PHP to optimize API payloads, cutting response sizes by 40% and speeding up frontend renders.
- Implemented a bulk CSV upload system for exam questions, turning a manual 2-hour process into a sub-minute operation.

Software Development Engineer Intern *Feb 2023 – Aug 2023*

- Revamped two core student-facing modules with a structured component architecture, reducing reported UI bugs by 30%.
- Refactored legacy backend cron jobs and optimized PHP REST APIs, reducing server load and improving endpoint response times.

PROJECTS

Nukkad: AI-native hyperlocal commerce for tier-3 India **nukkad.priyanshusaini.in**

TypeScript, Node.js, Express, MCP SDK, Prisma, PostgreSQL (Neon), Zod, Vitest, Render, Telegram Bot API, Gemini API

- Built an MCP server that lets customers and kirana shopkeepers in towns like Muzaffarnagar, Roorkee and Shamli order and run a shop by chatting in Hindi/Hinglish inside ChatGPT, Claude or Cursor, with no app to install.
- Designed role-scoped toolsets (customer, shopkeeper, admin) with business rules enforced in domain services, not prompts: same-city ordering, stock tracking, custom orders, delivery-code order lifecycle and cash-on-delivery.
- Added phone-OTP signup, Google sign-in via MCP OAuth discovery, Telegram order alerts with Accept/Reject buttons, and a web chat where a Gemini model drives the same tools for users without an AI assistant.
- Deployed on Render + Neon with Prisma migrations and a Vitest suite in GitHub Actions; submitted to ChatGPT app review.

Movie Semantic Search **github.com/priyanshusaini1102/movies-vector-search**

Node.js, Qdrant, FastEmbed, Transformers.js, LangChain text splitters

- Embedded movie descriptions with FastEmbed and indexed them in Qdrant with metadata payloads, comparing fixed-size token, sentence-aware (with overlap) and embedding-based semantic chunking.

EDUCATION

Graphic Era University, Dehradun — Master of Computer Applications (MCA) **2021 – 2023**

IMS Noida — Bachelor of Computer Applications (BCA) **2018 – 2021**
